

G3 Seed Treater

Graham Seed Treating Systems has been designing and retailing seed treating systems in North America for well over a decade. The G3 is the most common treater in Canada and we are committed to providing outstanding service and support for everything we sell!

Our Patented G3 Treating Systems

This patented **High Accuracy / High Speed** system delivers the **BEST** value available of any Seed Treating System

How It Works

- The G3 or G40 transforms the grain flow into an air suspended curtain
- The liquid treatment is then cross applied to the grain curtain with a controlled droplet nozzle
- Each kernel receives a precise dosage as it falls by the nozzle load
- A sealed delivery system eliminates operator contact with chemicals
- Optimal throughput ranges from 15 – 25 bu/min

(The G40 Treater ranges in the 40 –50 bu / min range)
